“Solution Series”

The Junxion Box™ cellular router

Models

JB-120e (Ethernet LAN only) MSRP \$599*

JB-120g (Ethernet & Wi-Fi LAN) MSRP \$699*

The Junxion Box™ cellular router uses a patent-pending software platform to create an easy yet commercial-grade means of connecting fleets of computing devices like laptops, ATM machines, retail point of sale terminals and mobile telemetry systems with the latest wireless data services from AT&T

Junxion's latest product is now available, and includes:

- New kernel update allows for enhanced enterprise functionality
- GRE tunneling which allows for greater flexibility in establishing enterprise VPNs
- NAT Traversal for use in terminating IPsec in NAT environments
- Dead Peer Detection (DPD) allows IKE peer failover to increase IPsec reliability
- Aggressive Mode option for key negotiation
- 802.11g Wi-Fi is now supported with the JB-120g model
- WPA Enterprise has been added as an authentication option for secure Wi-Fi
- Splash page feature has been converted to exclusively support custom HTML
- Boot time has improved to be 50% faster than was available on the previous kernel
- Improved IPsec WAN Juggler functionality
- Legacy 2G and other discontinued data cards are no longer supported
